05 Operating Processes

BRAND LLC (a Wyoming limited liability company) with H2 Company (Seoul). Standard operating procedures for the US Amazon launch of BRAND fiber optic HDMI (High Definition Multimedia Interface) cables.

Version: built October 8, 2026. Model basis: Medium scenario, Copper duty scenario, FX 1,430 KRW per USD, from output/03_Financial_Model_5Y.xlsx.

Readers: Lucy (owner and operator), Mark (US operations advisor), the virtual assistant (VA), the customs broker, the 3PL (third party logistics warehouse). The 세무사 (Korean licensed tax accountant) reads sections 7 and 8.

How to read a number: every model figure in this document comes from build/figures.json, which is pulled from the recalculated workbook. Every assumption carries a basis label: Evidence based (the brief, the August 2026 deal, the August model, a verified regulatory fact) or Management estimate. A bracketed [PLACEHOLDER] is a fact that does not exist yet and must not be filled in by guesswork.

Standing rule: no SOP (standard operating procedure) is complete until its owner has run it once and recorded the KPI (key performance indicator). Each SOP names the flowchart in output/04_Flowcharts that draws the same process.

Contents

No.	Process	Owner	Flowchart (output/04_Flowcharts)
1	Purchasing and QC (quality control)	Lucy	03_inbound_supply_chain
2	Customs and duty management	Broker, Mark	03_inbound_supply_chain, 08_entity_money_goods_flow
3	FBA (Fulfillment by Amazon) and 3PL inbound	Lucy, 3PL	03_inbound_supply_chain
4	Listing creation and PPC (pay per click) management	Mark, VA	02_order_to_cash_amazon
5	Inventory planning and reorder points	Lucy, Mark	05_monthly_operating_cadence
6	Returns and warranty (5 Year Signal Guarantee)	Mark, VA	04_returns_and_signal_guarantee
7	Monthly close and KPI review	Lucy, Mark, 세무사	05_monthly_operating_cadence, 06_day90_scale_or_kill
8	Compliance calendar	Lucy, attorney, broker, 세무사	08_entity_money_goods_flow
A	Numbers used in this document and where they come from		
B	Glossary		

Owners in one line. Lucy decides and signs: purchase orders, factory payments, capital, filings. Mark prepares and runs the US side: listings, advertising, customer service, the monthly KPI pack. Mark

does not negotiate or sign contracts for BRAND LLC; that keeps the US Korea treaty position (no permanent establishment, PE) clean. The VA executes daily checks under written instructions.

1. Purchasing and QC

Buy the right units at the right time, labeled and tested so that nothing has to be touched again in the US. QC means quality control. SKU is a stock keeping unit (one length of one line). FNSKU is the Fulfillment Network Stock Keeping Unit, the barcode Amazon scans. PO is a purchase order. FOB is free on board, the price at the factory port. DDP is delivered duty paid (the freight price includes duty and delivery). MOQ is the minimum order quantity.

Owner	Lucy (places the PO, pays the factory, owns the factory relationship). Mark reviews the quantity against the reorder table (section 5) before Lucy signs. The third party QC agency reports to Lucy with a copy to Mark.
Trigger	Monthly, in the inventory review (section 5), when the reorder table shows a PO to place this month (an arrival the model needs lead time months out). Launch lots: air DDP for the first 5 hero SKUs at 100 to 300 units each (brief, evidence based). Ad hoc: a stockout forecast inside the lead time (1 month by air, 2 months by ocean), or a factory price or MOQ change.
Steps	1. Pull the PO quantity from the reorder table (section 5): the arrival the model needs lead time months out, corrected for actuals (model target closing stock for the arrival month, minus actual on hand and in transit stock, plus the units forecast until that arrival). Split the line total by SKU share of trailing 30 day sales. Round up to the factory carton quantity. [PLACEHOLDER: carton quantity per SKU from the factory] 2. Confirm the FOB price per SKU in writing against the H2 cost base (KRW 11,470 landed Korea for the hero 8K 10M, evidence based) and the Alibaba benchmark of $17 to $22 FOB for a comparable 30 ft cable. If the quote is above the H2 base, stop and rerun the SKU Unit Economics tab before signing; at the Alibaba cost the hero SKU loses money at $44.99. 3. Issue the PO with: SKU, length, quantity, FOB price, Incoterm (FOB China for ocean, DDP air for launch lots), FNSKU labels applied at the factory, carton marks, ship date, QC hold point, and the packaging rule (category name Ultra High Speed HDMI Cable on the box, never an HDMI version number). 4. Pay the deposit: 30% at order, 70% after the QC report passes and before shipment (management estimate, model input). Pay from the BRAND LLC bank account, never from a personal account. 5. Collect the document set from the factory before the QC visit: HDMI Adopter certificate [PLACEHOLDER: number], ATC (HDMI Authorized Test Center) test report [PLACEHOLDER: report number], FCC (Federal Communications Commission) test report for the active heads [PLACEHOLDER], CL3 (in wall cable fire rating, Class 3) documentation [PLACEHOLDER] if in wall is claimed, Prop 65 (California Proposition 65) warning label artwork proof, packaging artwork proof. 6. Book the third party QC inspection before departure (budget $0.25 per unit for QC and labeling, management estimate). Sample plan: [PLACEHOLDER: AQL (acceptable quality limit) level agreed with the agency]. Mandatory tests: signal lock at full length on an 8K 60Hz or 4K 120Hz source, both ends labeled SOURCE and DISPLAY with arrows, FNSKU scan on every unit sampled, carton drop test, label and insert check.

	7. Decision on the QC report: pass, rework, or reject. Rework and reject hold the balance payment. Record the result in the PO log. 8. Release the balance payment, receive the commercial invoice, packing list and the bill of lading or air waybill, and hand the document set to the customs broker (section 2) the same day. 9. Log the PO: date, SKUs, units, FOB total in USD and KRW, deposit date, balance date, QC result, ship date, expected arrival. This log feeds the cash forecast (section 7).
System	PO log (a tab in 07_90_Day_Launch_Plan.xlsx or a shared sheet), the factory quote sheet, the QC agency portal, the BRAND LLC bank account. Document folder per PO: quote, PO, deposit receipt, QC report, invoice, packing list, bill of lading, test reports.
KPI	• QC first pass rate: target 100% of lots pass without rework (management estimate). • On time ship rate: 90% of POs ship within 7 days of the PO ship date (management estimate). • FOB price variance to the H2 cost base: 0% or better; any increase goes to the SKU Unit Economics tab the same week. • Defect rate found at QC: below 1% of units sampled (management estimate); above 2% triggers a factory corrective action request.
Failure modes	• Factory ships without FNSKU labels: Amazon rejects or relabels at a fee and the lot sits at the 3PL. Fix: FNSKU on the PO, label check in the QC sample plan. • Factory quote drifts toward the Alibaba benchmark: the hero SKU net falls from $8.00 to a loss. Fix: price confirmed in writing before every PO, volume tier negotiated at 5,000 units per quarter (lever 7). • HDMI version number printed on the box: HDMI LA (HDMI Licensing Administrator) can seize the lot. Fix: artwork proof signed off by Mark before production. • Missing test reports (ATC, FCC, CL3): listing claims cannot be supported and an Amazon or regulator request cannot be answered. Fix: no PO without the document set, placeholders filled with real numbers. • Balance paid before QC: no leverage on a failed lot. Fix: balance only after the QC pass in writing.
Flowchart	03_inbound_supply_chain (factory PO, QC, freight, customs, 3PL, FBA). The money side is on 08_entity_money_goods_flow.

2. Customs and duty management

Every China origin shipment needs a formal customs entry; de minimis is gone (verified fact). BRAND LLC is the importer of record through a licensed customs broker with a continuous bond (about $500 per year). CBP is US Customs and Border Protection. HTS is the Harmonized Tariff Schedule. MFN is the most favored nation duty rate. Section 301 is the US trade law tariff on China origin goods.

Duty scenarios the model carries (facts.json, duty table; the 12.5% forced labor action applies either way):

Scenario	HTS	MFN	Section 301 list	Section 301 forced labor	Pending action	Total	Basis
Copper (default)	8544.42.90	2.6%	25% List 3	12.5%	0%	40.1 %	Evidence based (brief)
Fiber	8544.70.00	0%	0% assumed	12.5%	0%	12.5 %	Evidence based rates; List 3 coverage is a broker check [PLACEHOLDER]
Stress	8544.42.90 plus the pending action	2.6%	25%	12.5%	10%	50.1 %	Management estimate per brief

What the ruling is worth (figures.json, full recalc, Medium): landed COGS (cost of goods sold) 38.0% at the copper rate versus 33.5% at the fiber rate; hero net per unit $8.00 versus $10.03; 18 month net $153K versus $206K. The stress case cuts 18 month net to $134K.

Owner	Customs broker (entries, bond, ruling request drafting). Mark (reviews every entry summary, tracks the ruling). Lucy (signs the power of attorney, pays duty and broker fees, decides the classification position with the broker).
Trigger	Week 1 of the launch plan: engage the broker, post the continuous bond, file the CBP binding ruling request (filed in week 1, 30 to 90 days). Every shipment: the factory document set arrives (section 1 step 8). Any tariff change notice from the broker, including a decision in the pending second Section 301 investigation.
Steps	1. Sign the broker power of attorney in the exact legal name BRAND LLC, matching the Wyoming filing, the EIN (Employer Identification Number) and the bank account. Post the continuous bond (about $500 per year, evidence based). 2. File the binding ruling request in week 1 with the product construction: fiber cores carry the video data, thin copper conductors carry power and control. Ask for 8544.70.00 (optical fiber cables, fiber rate 12.5%) against 8544.42.90 (electric conductors fitted with connectors, copper rate 40.1%). Attach the factory construction drawing [PLACEHOLDER] and the ATC test report. 3. Until the ruling arrives, enter at the copper rate (the model default). Do not enter at the fiber rate on an unsupported position; a later CBP reclassification brings back duty plus interest. 4. Per shipment: broker receives the commercial invoice, packing list, bill of lading or air waybill, and the HTS line per SKU. Mark checks the declared value equals the FOB price on the PO (customs value = FOB, evidence based model convention) and that country of origin reads China on every carton. 5. Broker files the entry. Duty, MPF and HMF (merchandise processing fee and harbor maintenance fee, about 0.35% of FOB on ocean entries, management estimate), and the broker entry fee (about $150 per entry) are paid from the BRAND LLC account. Reconcile the duty bill to the model duty per unit ($2.96 on the hero at the copper rate; $0.92 at the fiber rate).

	6. File the entry summary, the duty receipt and the ruling correspondence in the customs folder. Keep every record five years (broker to confirm the retention rule [PLACEHOLDER]). 7. When the ruling arrives: if fiber, switch the HTS line on the next entry, ask the broker about refunds on earlier entries, and move the DutyScenario selector in the workbook to 2 (Fiber). If copper, keep the default and reprice the SKU Unit Economics tab if any SKU falls below the Day 90 contribution floor of $11. 8. Quarterly: broker confirms the Section 301 status (List 3 coverage, the forced labor action, the pending second investigation). Mark updates the Landed Cost & Tariff Scenarios tab and reports the change in the monthly KPI pack.
System	Broker portal and ACE entry summaries (ACE is the CBP Automated Commercial Environment), the customs folder, the workbook tab Landed Cost & Tariff Scenarios, the DutyScenario selector on Assumptions.
KPI	• Ruling filed in week 1; decision logged on receipt (30 to 90 days). • Entry accuracy: 0 post entry corrections per quarter (management estimate). • Duty paid per unit versus model: within 2% of $2.96 on the hero at the copper rate. • Customs holds: 0 exams caused by paperwork; any exam logged with cause and days lost.
Failure modes	• Legal name mismatch between the bond, the EIN and the bank: entry rejected or payments bounce. Fix: one legal name string copied from the Wyoming certificate everywhere. • Entering at the fiber rate without a ruling: back duty plus interest and a compliance flag. Fix: copper rate until the ruling, documented position. • Stress case: the pending Section 301 action adds 10 points (total 50.1%). Fix: the model stress scenario is prepared; the response is a price ladder test (lever 10) and a volume price tier (lever 7), not a margin cut. • HDMI LA seizure at the border for unlicensed product: lot lost. Fix: HDMI Adopter status and ATC report on file before the first PO. • Undervaluation on the invoice to save duty: a customs fraud exposure for the LLC and for Lucy. Never.
Flowchart	03_inbound_supply_chain (customs entry node) and 08_entity_money_goods_flow (duty and filings edges).

3. FBA and 3PL inbound

FBA is Fulfillment by Amazon. The 3PL holds bulk stock and feeds FBA in small replenishments, so Amazon storage fees and aged inventory surcharges stay low (lever 9: storage and inbound from 2.0% to 1.5% of revenue, management estimate). Launch lots go air DDP straight to FBA; from Month 7 proven SKUs move by ocean through the 3PL (model input, management estimate).

Owner	Lucy (3PL contract, freight booking, payment). 3PL (receiving, storage, FBA shipment prep). VA (creates the FBA shipment plans and tracks receipts). Mark (approves the replenishment quantity each week).
Trigger	Customs release of a shipment (section 2) or a 3PL stock arrival notice. Weekly: FBA available stock on any launch SKU falls below 4 weeks of forward

	sales (management estimate). Amazon inbound capacity or placement fee changes.
Steps	1. Air DDP launch lots: the forwarder delivers directly to the FBA receive center named in the shipment plan. VA creates the plan in Seller Central before departure so the carton labels print at the factory. 2. Ocean lots (from Month 7): drayage from the port to the 3PL. 3PL receives against the packing list, counts cartons, scans a sample of FNSKUs, reports damage within 24 hours, and books the stock as available. 3. VA builds the FBA replenishment plan weekly: quantity per SKU = 4 weeks of forward units from the Medium ramp (for example Month 12: 2,050 units per month on the whole line, split by SKU share of trailing 30 day sales) minus FBA available and inbound. 4. 3PL picks, labels the cartons with the Amazon shipment labels, and ships by the carrier the plan names. Inbound placement and prep budget: $0.50 per unit (management estimate). 5. VA tracks each shipment to Receiving complete, reconciles received units to shipped units, and opens a case for any shortfall above 1% within 30 days of receipt. 6. Monthly: 3PL stock count reconciled to the inventory record; FBA stock reconciled to the Seller Central inventory ledger; aged inventory (over 180 days; management estimate, confirm against the current Amazon fee schedule) reviewed and either moved out with a coupon or removed before the surcharge. 7. Record every inbound: shipment ID, SKU, units shipped, units received, days from ship to receive, discrepancies. The 3PL invoice is checked line by line against this record before payment.
System	Seller Central (Send to Amazon, inventory ledger, inbound performance), the 3PL warehouse portal, the inbound log, the freight forwarder booking.
KPI	• In stock rate on the launch SKUs: at or above 97% of days (management estimate). • Receiving discrepancy: below 0.5% of units; every case above 1% opened within 30 days. • Ship to FBA receive time: within 10 days for the 3PL feed; within 25 days door to door for air lots (management estimates). • Storage and inbound cost: 2.0% of revenue at launch, 1.5% once the 3PL feed runs (model lever 9).
Failure modes	• Stockout on the hero SKU: rank and reviews stall, and the ad spend buys nothing. Fix: the 4 week FBA cover rule, the section 5 reorder table, and air top ups when the ocean lot is late. • Over sending to FBA: storage and aged inventory surcharges, capacity limits. Fix: 3PL holds bulk, FBA gets 4 weeks. • Carton labels wrong or missing: Amazon relabel fee or refused receipt. Fix: shipment plan before the factory prints labels; 3PL label check. • 3PL fails (closes, loses stock, bills wrong): sales stop. Fix: monthly count reconciliation, two 3PL quotes on file, stock insured [PLACEHOLDER: policy]. • Receiving shortfalls never claimed: silent margin loss. Fix: reconciliation within

	30 days, cases opened by the VA.
Flowchart	03_inbound_supply_chain (3PL and FBA inbound nodes).

4. Listing creation and PPC management

PPC is pay per click advertising. ASIN is the Amazon Standard Identification Number. ACOS is advertising cost of sales (ad spend divided by ad attributed sales). TACOS is total advertising cost of sales (ad spend divided by total sales); the gates use TACOS. The model ad spend by phase (Medium, evidence based from the August model): 30% of revenue Months 1 to 3, 22% Months 4 to 6, 15% Months 7 to 12, 11% Months 13 to 18, never below 8% in any year.

Owner	Mark (listing structure, copy approval, campaign structure, bid rules, weekly optimization). VA (daily checks, search term reports, negative keywords, coupon setup). Lucy (approves claims that need factory evidence: CL3, FCC, HDMI category name).
Trigger	Brand Registry approved on the pending trademark application (weeks 3 to 4), then listings built in weeks 6 to 9 before the first inventory receipt. Weekly: the PPC optimization slot in the monthly cadence (05_monthly_operating_cadence). Any listing suppression, policy warning or IP (intellectual property) complaint: same day. An item open more than 14 days is a Day 90 kill trigger.
Steps	1. Build one parent ASIN per line with the lengths as child variations (lever 6): the 8K line (8K 7M, 8K 10M, 8K 15M, 8K 20M at launch) and the 4K line (4K 30M at launch). Titles, bullets, A+ outline, backend keywords and the image brief are in 09_Amazon_Listing_Kit.docx. 2. Apply the naming rule to every field: the category name Ultra High Speed HDMI Cable (8K line) or Premium High Speed HDMI Cable (4K line, pending certification, placeholder), never HDMI 2.1 or HDMI 2.0. Titles may say 48Gbps and 8K. Say fiber optic HDMI or hybrid active optical; never pure fiber or all glass. 3. Claims gate: in wall or CL3 only with the CL3 document on file; FCC statement only with the factory FCC report; the 5 Year Signal Guarantee wording exactly as in section 6. Add the Prop 65 statement. Lucy signs off the claims list. 4. Set the price ladder: list price and sale price per SKU from the SKU table (hero list $59.99, sale $44.99). Coupons and the plus or minus 5% ASP (average selling price) test (lever 10) run one at a time, two weeks each, logged with the result. 5. Launch campaigns in this order: automatic campaign per parent for discovery, then exact match manual campaigns on the winning search terms, then a branded defense campaign. Daily budget per the phase rate on forecast revenue. 6. Weekly: VA pulls the search term report, adds negatives for terms with 15 clicks and no order (lever 4, keyword pruning, management estimate rule), moves converting terms to exact match, and reports ACOS, TACOS, conversion and spend per SKU. 7. Review velocity (lever 5): enroll in Vine where eligible, use the Brand Registry follow up email, and the insert card with the QR (quick response) code setup video. Never incentivize or gate reviews; never contact buyers outside Amazon

	messaging for reviews. 8. Account health: VA checks Account Health, Voice of the Customer and the Performance Notifications page every working day and logs the status. Any suppression or warning goes to Mark the same day with a plan to clear it within 14 days. 9. Month end: Mark writes the listing and ads section of the KPI pack: conversion by SKU, TACOS versus phase rate, review count and rating (reported, never estimated), suppressions, and the next month budget.
System	Seller Central (Listings, Brand Registry, A+, Advertising console, Account Health, Voice of the Customer), the keyword and negative list sheet, 09_Amazon_Listing_Kit.docx, the claims evidence folder.
KPI	• Unit session conversion: Day 90 pass at or above 8% on at least 3 of the 5 launch SKUs; hero below 5% is a kill trigger (observed at the gate). • TACOS: at or below 30% in Month 3 and falling month over month (kill above 40%); at or below 15% in Month 12 (kill above 25%). • Suppressed listings and IP complaints open more than 14 days: 0. • Review velocity: reported monthly; no target is stated because no review count exists yet [PLACEHOLDER: first 90 day actuals].
Failure modes	• HDMI version number in a title or image: listing removal and licensing exposure. Fix: naming rule in the claims gate, VA checks every new field. • Ad spend runs above the phase rate without conversion: TACOS above 40% in Month 3 is a kill trigger. Fix: weekly negatives, budget caps per campaign, exact match migration. • Listing suppression that stays open: a lost quarter is the Low scenario (Months 19 to 21 at 10% of trend). Fix: daily health check, documents ready to upload, 14 day clearance rule. • Review policy breach: account suspension. Fix: Vine and insert card only, no incentives, no outside contact. • Unsupported in wall or CL3 claim: liability and a false advertising exposure. Fix: claims gate with documents on file.
Flowchart	02_order_to_cash_amazon (session to settlement). The gate numbers are drawn on 06_day90_scale_or_kill.

5. Inventory planning and reorder points

Working capital is what kills cable businesses, not margin. The model holds 2.5 months of forward units on hand (Medium; Low 3, High 2; management estimates) plus the lead time demand in transit, funded by the business. Lead time 1 month by air (Months 1 to 6) and 2 months by ocean from Month 7 on proven SKUs. Deposit 30% at order, 70% at shipment. Amazon pays out with a 14 day lag, so 14/30 of a month's net proceeds is still a receivable at month end (evidence based).

Stock rule (the workbook rule, Cash Flow and Working Capital tab). At each month end, target closing stock = cover months (2.5 in Medium) times the average of the next three months of units sold on all channels. Arrivals needed in a month = target closing stock minus (opening stock minus that month's sales), never below zero. The PO for an arrival is placed lead time months earlier: 1 month by air for arrivals through Month 6, 2 months by ocean for arrivals from Month 7, so Month 5 places two POs (the last air lot and the first ocean lot) and Month 0, before launch, places the launch PO. Deposit 30% of FOB at order, balance 70% at shipment (the month before arrival); freight, duty, broker, inbound

and QC are paid on arrival. The table below is the model's own numbers (figures.json scenarios.Medium.monthly: units, closing_stock, arrivals, inventory_on_hand, inventory_in_transit), so the cash forecast and the PO plan agree.

Month	Units sold	Target closing stock (2.5 x next 3 months average)	Arrivals landing this month (units)	PO to place this month (units, arrival month, mode)	Deposit due (30% of FOB)	On hand at month end ($, landed cost)	In transit plus deposits ($)
Month 0	n/a	n/a	n/a	1,067 for Month 1 by air	$2,361	n/a	n/a
Month 1	150	917	1,067	582 for Month 2 by air	$1,288	$14,630	$4,292
Month 2	240	1,258	582	743 for Month 3 by air	$1,646	$20,083	$5,485
Month 3	360	1,642	743	917 for Month 4 by air	$2,029	$26,201	$6,764
Month 4	500	2,058	917	1,108 for Month 5 by air	$2,454	$32,851	$8,179
Month 5	650	2,517	1,108	1,303 for Month 6 by air; 1,500 for Month 7 by ocean	$6,206	$40,166	$12,938
Month 6	820	3,000	1,303	1,700 for Month 8 by ocean	$3,763	$47,880	$14,832
Month 7	1,000	3,500	1,500	1,942 for Month 9 by ocean	$4,298	$55,860	$16,843
Month 8	1,200	4,000	1,700	2,622 for Month 10 by ocean	$5,805	$63,840	$20,133
Month 9	1,400	4,542	1,942	2,836 for Month 11 by ocean	$6,278	$72,485	$25,629
Month 10	1,600	5,564	2,622	3,012 for Month 12 by ocean	$6,669	$88,802	$27,594
Month 11	1,800	6,600	2,836	3,277 for Month 13 by ocean	$7,254	$105,331	$29,483
Month 12	2,050	7,562	3,012	3,448 for Month 14 by ocean	$7,633	$120,691	$31,813

Month 0 is the pre launch month: its PO is the launch lot. Units sold are all channels (Amazon US only in Year 1). Source: figures.json scenarios.Medium.monthly (units, closing_stock, arrivals, inventory_on_hand, inventory_in_transit); cover, lead times, ocean start and deposit from the Assumptions tab (Active column). Deposit base: the model keeps one inventory pool at the hero cost, so FOB is $7.38 per unit (8K 10M at FX 1,430 KRW per USD) for every unit and on hand stock is valued at the P&L landed cost ($15.96 per unit in Year 1); in transit includes the deposits on open orders. Low: cover 3 months, air only; High: cover 2 months. Split the line total by SKU share of trailing 30 day sales; at launch use the brief's air DDP for the first 5 hero SKUs at 100 to 300 units each (evidence based).

Cash check on the hero SKU: a 1,000 unit PO at the August landed cost of $17.10 per unit is about $17,096 of inventory, with $5,129 due at order. The model's peak cash need in the Medium case is $96K in Month 12 against opening capital of $39,000, and the funding line of $116K must be in place by Month 2.

Owner	Lucy (decides and funds the PO). Mark (prepares the reorder table, the SKU split and the cash check). VA (updates sales and stock actuals weekly).
Trigger	Monthly, week 2 of the cadence: inventory and cash review (05_monthly_operating_cadence). Weekly: FBA available on any launch SKU below 4 weeks of forward sales (section 3). At the Day 90 gate: switch proven SKUs to ocean (Month 7 in the model); delist losers.
Steps	1. VA updates the inventory sheet: units sold last 30 days per SKU, FBA available, FBA inbound, 3PL on hand, in transit (by PO), next arrival dates. 2. Mark refreshes the forecast: Medium ramp as the base, adjusted by the trailing 30 day run rate per SKU (if actuals are more than 20% off the ramp for two months, switch the active scenario in the workbook and tell Lucy). 3. Compute the target closing stock for the arrival month (2.5 times the average of the next three months of units) and the PO quantity: target minus the stock expected at the start of that month (actual on hand plus in transit, less the units forecast until then). Split by SKU, round to cartons. If actuals match the model, the quantity equals the arrivals column of the table. 4. Cash check: PO deposit (30%) and balance (70%) placed on the cash forecast by month; confirm the balance after the PO stays above zero for the next three months after funding, and that the runway stays at or above 4 months (Day 90 pass level; kill below 2). 5. Freight mode: air for launch lots and for any top up that would otherwise stock out; ocean (lead 2 months) for proven SKUs after the Day 90 gate. Air costs $8.50 per kg packaged, ocean $1.10 per kg (management estimates): on the hero that is $1.74 versus $0.22 per unit. 6. Lucy approves or trims the PO. Trims are recorded with the reason (cash, demand, factory capacity). 7. Hand the approved quantity to section 1 (purchasing). Record the decision in the inventory log and the KPI pack. 8. Slow movers: any SKU below 50% of its forecast for two months is flagged; three months triggers a coupon sell down and no reorder until the gate review.
System	Inventory sheet (per SKU actuals), the workbook tab Cash Flow and Working Capital (monthly 1 to 24), the PO log, Seller Central inventory reports, 3PL portal.
KPI	• Months of cover on hand plus in transit: 2.5 (Medium) with a floor of 6 weeks on the hero. • Stockout days on launch SKUs: 0 per month (management estimate). • Inventory on hand within 15% of the model month (Medium Month 12 on hand $121K, in transit $32K). • Cash runway: at or above 4 months at every review.
Failure modes	• Over ordering on an optimistic forecast: cash locked in stock, aged inventory, the funding line exhausted. Fix: the target stock rule, trailing 30 day adjustment,

	Lucy trims. • Under ordering before the ocean switch: a stockout exactly when the ad spend has built rank. Fix: lead time plus cover in the rule, air top up option. • Switching to ocean too early on an unproven SKU: 2 months of stock on a loser. Fix: ocean only after the Day 90 gate per SKU. • Forecast not updated: the PO plan and the cash forecast drift apart. Fix: VA weekly actuals, Mark monthly refresh. • Low case behavior: the model keeps buying through the lost quarter; an operator must pause POs while a listing is suppressed (model note low_peak_need_ordering).
Flowchart	05_monthly_operating_cadence (inventory and cash week) and 03_inbound_supply_chain.

6. Returns and warranty (5 Year Signal Guarantee)

The guarantee is the differentiator: if a BRAND cable loses signal within 5 years, the replacement ships before the return arrives. Direction proof design (color coded SOURCE and DISPLAY ends, printed arrows, QR setup video) is lever 3, which the model credits with returns from 3.0% to 2.5% (Medium, Year 2 onward). Returns and storage reserve on the hero: $2.25 per unit (August model).

Owner	Mark (policy, triage rules, factory claims with Lucy). VA (daily customer messages, replacement orders, return log). Lucy (factory credit negotiation for defects).
Trigger	A buyer message, a return request, a negative review or seller feedback mentioning signal loss, no picture, flicker or wrong direction. Weekly: return rate and reason code review. Monthly: root cause summary to the factory.
Steps	1. Within 24 hours the VA answers with the triage script: confirm the SOURCE end is at the player or console and the DISPLAY end at the screen; confirm the source output setting (4K 120Hz or 8K 60Hz) and that the device port supports it; send the QR setup video link. [PLACEHOLDER: share of signal complaints that are direction or settings issues, from the first 90 day actuals]. 2. If the triage does not fix it: register the guarantee claim (order ID, SKU, purchase date, fault description, photos) in the return log. 3. Ship the replacement the same working day from FBA (multi channel fulfillment order) or from the 3PL. Do not wait for the return. Send the buyer the prepaid return label for the faulty unit. 4. Within the Amazon return window the buyer may also use the Amazon return path; the VA records the Amazon return reason code against the same claim so the rate is not double counted. 5. Returned units go to the 3PL (not back to FBA) for a bench test: signal lock at full length, head inspection, connector damage. Result logged as: no fault found, user damage, manufacturing defect, shipping damage. 6. Monthly: Mark sends the factory the defect summary and claims a credit for manufacturing defects against the next PO. Lucy agrees the credit in the PO (section 1). Target: factory credit covers 100% of confirmed manufacturing defects [PLACEHOLDER: warranty terms in the factory agreement]. 7. Monthly KPI: return rate by SKU and by reason code against the gate levels

	(Day 90 pass at or below 4%, kill above 7%; Month 12 pass at or below 3%, kill above 5%). Product changes (lever 3) go to the factory with the data. 8. Guarantee registrations (the trade up registration and the Spec Match finder on the off Amazon site, lever 11) are stored in the email list with consent, never used for review requests.
System	Seller Central (Buyer messages, Manage Returns, Voice of the Customer, multi channel fulfillment), the return log, the 3PL bench test form, the factory claim file, the email list tool [PLACEHOLDER: tool choice].
KPI	• Return rate: 3% Year 1 in the Medium model, 2.5% from Year 2; never below 2% in any plan (brief realism rule). • First response time: under 24 hours on 95% of messages (management estimate). • Replacement shipped the same working day on 100% of accepted claims. • No fault found share of returns: reported monthly; a fall shows the direction proof design and the setup video are working.
Failure modes	• Return rate above 7% at Day 90: a kill trigger. Fix: triage script, direction proof packaging, bench test data to the factory within the first 60 days. • Replacement held until the return arrives: the guarantee promise is broken and reviews say so. Fix: same day replacement rule, stock reserved for claims (1% of units, management estimate). • Returned units sent back into FBA: a known faulty unit resold. Fix: returns to the 3PL only, bench test before any restock. • Factory refuses credits: margin erodes by the defect rate. Fix: warranty clause in the PO terms before the first order. • Review requests sent to guarantee registrants: an Amazon policy breach. Fix: consent and purpose limits in the email tool.
Flowchart	04_returns_and_signal_guarantee.

7. Monthly close and KPI review

Close the books by working day 10, review the KPI pack against the model, and decide on cash and orders. The Day 90 gate (end of Month 3) and the Month 12 gate are run inside this process with the thresholds below. Gate result rule: KILL if any kill trigger fires; PASS if every modeled pass threshold is met; REVIEW otherwise, which means fix and retest within 30 days. Model results: Day 90 Medium PASS, Low REVIEW, High PASS; Month 12 Medium PASS, Low KILL, High PASS.

Day 90 gate (end of Month 3)

Metric	Pass	Kill trigger	Source	Medium model value
Unit session conversion on at least 3 of the 5 launch SKUs	at or above 8%	hero below 5%	observed	observed at the gate
TACOS in Month 3, falling month over month	at or below 30%	above 40%	model	30%
Return rate	at or below 4%	above 7%	model	3%

Metric	Pass	Kill trigger	Source	Medium model value
Contribution per unit before advertising on at least 3 of 5 SKUs	at or above $11	hero below $8	model	$12.14 (hero)
Cash runway after funding the next purchase order	at or above 4 months	below 2 months	model	10.2 months
Suppressed listing or IP complaint	none open	any open more than 14 days	observed	observed at the gate

Month 12 gate

Metric	Pass	Kill trigger	Source	Medium model value
Monthly revenue in Month 12	at or above $70,000	below $50,000	model	$86,100 (Low $46,740)
Cumulative net	at or above $0	below ($25,000)	model	$38,040
TACOS	at or below 15%	above 25%	model	15%
Return rate	at or below 3%	above 5%	model	3%
Operating cash flow	positive two consecutive months	three consecutive negative months with a funding gap above $50,000	model	passes

Kill means: No further capital, sell down inventory, delist losers, move to Plan B. Plan B (figures.json plan_b, management estimate): B2B (business to business) installer distribution plus Korea wholesale, revenue $188K in Year 1 with net $17K, $518K in Year 3 with net $50K.

Owner	Lucy (owner of the close, decides on cash and the gates). Mark (prepares the KPI pack and the gate scorecard). VA (pulls the Amazon reports). 세무사 (Korean books, the overseas direct investment follow up reports, the Korean filings). US CPA (certified public accountant) [PLACEHOLDER: firm] (Form 5472 preparation, California nexus question).
Trigger	Calendar month end; pack due working day 10; review call in week 2 of the cadence. The Day 90 gate at the end of Month 3 and the Month 12 gate at the end of Month 12, run as part of that month's review.
Steps	1. VA downloads from Seller Central: settlement reports for the month, the Amazon payouts received, the inventory ledger, the advertising invoices and the campaign report, returns and refunds, Voice of the Customer, Account Health. Note the 14 day payout lag: the last settlement of the month lands in the next month, so the receivable is 14/30 of the month's net proceeds. 2. Mark books revenue, referral fees, FBA fees, ad spend, refunds, storage, 3PL invoices, freight, duty and broker fees, insurance, software, the seller fee and the consulting fee into the bookkeeping file by model line. Inventory on hand and in transit are valued at landed cost.

	3. Reconcile: bank statement to the books; Amazon payouts to settlements; FBA units to the inventory ledger; duty paid to entries. Unexplained differences above $100 are investigated before the pack is issued (management estimate). 4. Produce the KPI pack (one page plus the tables): units, revenue, net and cumulative net versus the model month; TACOS; contribution per unit before and after advertising; return rate; conversion by SKU; inventory on hand and in transit; cash balance versus the model, where Medium Month 6 model cash before funding is ($40K); runway; open compliance items. 5. Scenario check: if two consecutive months land within the Low band, set the workbook selector to Low and rerun the cash and funding plan; present the funding gap and date to Lucy with the line of credit or investor option. 6. Gate months: Mark fills the gate scorecard with observed conversion and listing status plus the modeled metrics; the result (PASS, REVIEW, KILL) is written into the pack. KILL stops further capital: sell down inventory, delist losers, move to Plan B. REVIEW: fix and retest within 30 days. 7. Lucy and Mark review (one hour): decisions on the next PO (section 5), ad budget (section 4), price tests, compliance actions (section 8). Decisions and owners logged. 8. Send the 세무사 the month's bank statements, the Amazon payout summary, the consulting fee invoice and the owner draw record, in Korean summary form. Send the US CPA the quarter end books for the Form 5472 reportable transactions list (capital contributions, owner draws, any payments between Lucy, H2 Company and BRAND LLC).
System	Bookkeeping file [PLACEHOLDER: tool, for example a cloud ledger connected to the Mercury or Relay account], Seller Central reports, the workbook (Monthly PL Y1 Y2, Cash Flow and Working Capital, Funding and Breakeven), the KPI pack template, the decision log.
KPI	• Close completed by working day 10: 12 of 12 months. • Bank to books reconciliation difference: $0 after investigation. • Net versus model: within 10% of the Medium month (Medium 18 month net $153K, 13.1%; cumulative breakeven Month 8). • Gate scorecards delivered in Month 3 and Month 12 with a written result.
Failure modes	• Payout timing booked as revenue: revenue overstated and cash understated. Fix: settlement based revenue, payout lag receivable. • Owner draws, consulting fees and capital mixed with trade payments: the Form 5472 reportable transaction list is wrong and the penalty is $25,000. Fix: separate ledger accounts and a monthly list to the CPA. • Low band ignored for months: the funding gap arrives unannounced. Fix: two month rule for switching the scenario. • Gate skipped because the month was busy: capital keeps flowing into a losing plan. Fix: the gate is a line in the Month 3 and Month 12 close checklist with Lucy's signature. • Mark negotiating or signing for the LLC in the US: dependent agent risk to the treaty position. Fix: Lucy signs; Mark advises under the consulting agreement.
Flowchart	05_monthly_operating_cadence and 06_day90_scale_or_kill.

8. Compliance calendar

Formation month F is the month the Wyoming articles are filed. Model Month 1 (first inventory live on Amazon) is assumed to be about F+2, because the build sequence needs 8 to 10 weeks before the first sale (DECISIONS.md; management estimate). Fixed calendar dates (for example the Form 5472 due date) are shown as calendar dates. ODI is the overseas direct investment report (해외직접투자 신고) under the Foreign Exchange Transactions Act (FTA, 외국환거래법). USPTO is the United States Patent and Trademark Office.

Owner	Lucy (every filing is in her name or the LLC's; she signs). Attorney (trademark). Customs broker (bond and entries). 세무사 (Korean filings). US CPA (Form 5472). Mark (keeps the calendar, chases evidence, files the evidence folder). VA (Amazon account health daily).
Trigger	The calendar below, run at the week 4 compliance slot of the monthly cadence; any notice from the IRS (Internal Revenue Service), the Wyoming Secretary of State, the registered agent, the foreign exchange bank, USPTO, CBP or Amazon triggers an entry the same day.
Steps	1. Mark reviews the calendar in week 4 of every month: items due in the next 60 days are listed with owner, cost and the evidence required. 2. Lucy approves and pays; the owner files; the evidence (filing receipt, confirmation number, policy document, bank acknowledgment) goes into the compliance folder and the row is marked Done in 06_Compliance_Checklist.xlsx. 3. Any missed date is escalated to Lucy within 24 hours with the penalty exposure and the cure (for example a late Form 5472 carries a $25,000 penalty). 4. Once a year (formation anniversary month) Mark and the 세무사 reconcile the calendar against the actual filings and update the next 12 months.
System	06_Compliance_Checklist.xlsx (status dropdown), the compliance folder, the registered agent portal, the foreign exchange bank, the USPTO docket from the attorney, Seller Central Account Health.
KPI	• Filings on time: 100%. Penalties paid: $0. Account Health: healthy every day; any warning cleared within 14 days.
Failure modes	• Form 5472 with the pro forma Form 1120 missed: $25,000 penalty per year. Fix: CPA engaged in F+1, reportable transaction list every quarter (section 7). • Capital sent to the US before the ODI report is accepted: an FTA breach; enforcement against individual online sellers is rising (brief). Fix: the bank report is a hard stop before any transfer. • Wyoming annual report missed: the LLC loses good standing and the bank or Amazon can freeze the account. Fix: registered agent reminder plus the calendar. • Product liability insurance not bound in the month sales pass $10,000 (Medium Month 2, which passes the threshold by $80, so bind before Month 2 closes): Amazon can suspend the listing. Fix: quote in hand before launch, bind on the trigger. • Trademark office action missed: the application abandons and Brand Registry lapses with it. Fix: attorney docket mirrored in the calendar.

Flowchart	08_entity_money_goods_flow (filings edges).

Calendar by month, relative to formation month F

When	Item	Owner	Cost	Evidence
F+0	File the Wyoming single member LLC articles; appoint the registered agent. Exact legal name BRAND LLC recorded once and copied everywhere.	Lucy, attorney or formation service	$100 state fee (evidence based)	Certificate of organization, registered agent agreement
F+0	Form SS-4: EIN by phone or fax, no SSN (Social Security number) needed.	Lucy	$0	IRS EIN confirmation letter [PLACEHOLDER: EIN; CPA to confirm the notice name, CP 575 expected]
F+0	ODI report to the foreign exchange bank before any capital moves (any stake of 10% or more, any amount). Flag the incorporate H2 first question to the 세무사 in the same meeting: registration 599-64-00496 (H2 Company) is a sole proprietorship.	Lucy, 세무사	$0 filing; 세무사 fee [PLACEHOLDER]	Bank acceptance of the ODI report
F+0	Trademark application through a US licensed attorney (foreign applicants must). About $350 per class plus attorney fees [PLACEHOLDER: attorney quote].	Lucy, attorney	$350 per class plus fees	USPTO serial number and filing receipt [PLACEHOLDER]
F+0	Customs broker engaged, power of attorney signed, continuous bond posted (about $500 per year). CBP binding ruling request filed in week 1 (filed in week 1, 30 to 90 days).	Lucy, broker, Mark	$500 bond; ruling fee per broker quote [PLACEHOLDER]	Bond number, ruling request receipt
F+1	USD bank account for the LLC (Mercury or Relay; Payoneer or WorldFirst as fallback). Capital transfer only after the ODI acceptance; then the Korean remittance follow up report.	Lucy, 세무사	$0; bank fees [PLACEHOLDER]	Account opening letter, transfer confirmation, remittance report receipt

When	Item	Owner	Cost	Evidence
F+1	Securities acquisition follow up report after the capital is paid into the LLC (timing per the foreign exchange bank) [PLACEHOLDER: bank deadline].	Lucy, 세무사	$0	Bank acknowledgment
F+1	Form W-8BEN-E tax interview as a foreign owned entity; Amazon Professional seller account ($39.99 per month); identity verification; bank linked. Brand Registry on the pending trademark application.	Lucy, Mark	$39.99 per month	Account approval email, Brand Registry approval
F+1	US CPA engaged for Form 5472 with the pro forma Form 1120, and the California income tax nexus question from FBA inventory put on the CPA list.	Lucy, CPA	$800 per year preparation (management estimate)	Engagement letter
F+2	Product compliance file before the first PO: HDMI Adopter certificate and ATC test report from the factory, FCC test report for the active heads, CL3 documentation (before any in wall claim), Prop 65 label on the packaging, HDMI naming rule on all artwork.	Lucy, factory, Mark	Factory document fees [PLACEHOLDER]	Certificates and reports with numbers [PLACEHOLDER]
F+2	Written consulting or commission agreement between BRAND LLC and Mark (no equity, no authority to negotiate or sign). Keeps the treaty position: no US office, no US employees, no dependent agent.	Lucy, Mark, attorney	Attorney fee [PLACEHOLDER]	Signed agreement
F+3 to F+5	CBP binding ruling decision expected 30 to 90 days after filing. On receipt: HTS line updated, DutyScenario selector set, refunds requested if fiber.	Broker, Mark	$0	Ruling letter and number [PLACEHOLDER]

When	Item	Owner	Cost	Evidence
About F+4	Product liability insurance, $1.00M cover, bound in the first month sales pass $10,000 (Medium model Month 2, Amazon revenue $10,080; Low Month 4, High Month 1). Month 2 passes the threshold by $80, so bind before Month 2 closes. Quote obtained before launch.	Lucy	$1,200 per year (management estimate)	Policy document, certificate of insurance uploaded to Seller Central
About F+5	Day 90 gate review (end of model Month 3): scorecard signed by Lucy (section 7).	Lucy, Mark	$0	Signed scorecard
F+12	Wyoming annual report and fee, due in the formation anniversary month (registered agent to confirm the exact date [PLACEHOLDER]).	Lucy, registered agent	$60 (evidence based)	Filing receipt
F+12	Customs continuous bond renewal.	Broker	$500	Renewed bond notice
F+12	Korean annual business performance report on the overseas direct investment (date set by the foreign exchange bank) [PLACEHOLDER: deadline].	Lucy, 세무사	세무사 fee [PLACEHOLDER]	Bank acknowledgment
About F+14	Month 12 gate review (end of model Month 12): scorecard signed by Lucy (section 7).	Lucy, Mark	$0	Signed scorecard
About F+16	Product liability insurance renewal, 12 months after binding.	Lucy	$1,200 per year	Renewed policy
April 15 each year	Form 5472 with the pro forma Form 1120 for the prior calendar year (foreign owned single member LLC). Penalty for missing it: $25,000. Extension available through the CPA [PLACEHOLDER: confirm].	CPA, Lucy	$800 (management estimate)	Filed copy and proof of transmission
Each year, date per 세무사	Korean overseas financial account report if the month end aggregate of foreign accounts passes KRW 500M in any month of the prior year.	Lucy, 세무사	세무사 fee [PLACEHOLDER]	Filing receipt

When	Item	Owner	Cost	Evidence
As issued	USPTO office actions and, after registration, the maintenance filings [PLACEHOLDER: attorney to confirm the maintenance window; years 5 to 6 expected] (attorney docket; placeholder $0 in the model until Year 5).	Attorney, Lucy	Attorney quote [PLACEHOLDER]	USPTO notices and responses
Every working day	Amazon Account Health, Performance Notifications and Voice of the Customer check; any warning logged and escalated to Mark.	VA	$0	Daily log line
Every month, week 4	Compliance slot: calendar review, evidence filed, 06_Compliance_Checklist.xlsx status updated; Korean bookkeeping summary to the 세무사.	Mark, Lucy, 세무사	$0	Updated checklist
Every quarter	Reportable transaction list for Form 5472 (capital, draws, fees between Lucy, H2 Company and BRAND LLC) to the CPA; Section 301 status check with the broker.	Mark, CPA, broker	$0	Quarter end list and broker note

Basis: filing names, fees and penalties are facts from the brief (facts.json). Timing relative to formation is a management estimate from the launch critical path (01_launch_critical_path). Anything marked [PLACEHOLDER] is confirmed by the named professional before the date is relied on.

Appendix A. Numbers used in this document

Every figure below is read by the generator from build/figures.json (model) or build/facts.json (static facts). Rerun build/build_sops.py after the workbook changes and the document updates itself.

Figure	Value	Basis	Source key
Hero SKU 8K 10M sale price (list)	$44.99 ($59.99)	Evidence based	unit_economics.hero.price
Hero landed cost, August basis (share of price)	$17.10 (38%)	Evidence based	unit_economics.hero.landed_cost
Hero net per unit (margin)	$8.00 (17.8%)	Evidence based	unit_economics.hero.net
Hero contribution before advertising at ASP $42	$12.14	Evidence based	unit_economics.hero.contribution_before_ads_at_asp42
Hero duty per unit, copper versus fiber	$2.96 versus $0.92	Evidence based rates	unit_economics.per_sku (8K_10M)

Figure	Value	Basis	Source key
Hero freight per unit, air versus ocean	$1.74 versus $0.22	Management estimate	unit_economics.per_sku (8K_10M)
Landed COGS % Medium: copper, fiber, stress	38.0%, 33.5%, 39.6%	Model	duty.*.landed_pct_medium
18 month net Medium: copper, fiber, stress	$153K, $206K, $134K	Model	full_recalc.duty.*.m18_net
Medium 18 month revenue, net, margin, breakeven	$1.17M, $153K, 13.1%, Month 8	Model	scenarios.Medium.m18
Medium peak cash need (month), funding gap (needed by)	$96K (Month 12), $116K (Month 2)	Model	scenarios.Medium.cash
Low peak cash need (month), funding gap	$114K (Month 24), $136K	Model	scenarios.Low.cash
High peak cash need (month), funding gap	$34K (Month 7), $41K	Model	scenarios.High.cash
Medium Month 12 units, revenue, cumulative net	2,050, $86,100, $38,040	Model	scenarios.Medium.monthly (Month 12)
Inventory cover months Low, Medium, High	3, 2.5, 2	Management estimate	Assumptions tab (Active column)
Lead time air, ocean; ocean from Month	1 month, 2 months; Month 7	Management estimate	Assumptions tab
PO deposit at order	30%	Management estimate	Assumptions tab
Amazon payout lag	14 days	Evidence based	facts.amazon.payout_lag_days
Product liability insurance trigger and cover	$10,000 monthly sales; $1.00M cover; Medium Month 2 (passes by $80), Low Month 4, High Month 1	Evidence based	facts.amazon; scenarios.*.insurance_trigger_month
Hero FOB per unit at the model FX (PO deposit base)	$7.38	Evidence based (H2 cost base times 0.92, management estimate)	unit_economics.hero.fob_usd
Medium Month 12 target closing stock, arrivals, on hand, in transit	7,562 units, 3,012 units, $121K, $32K	Model	scenarios.Medium.monthly (Month 12)
Form 5472 penalty; Wyoming formation and annual fee	$25,000; $100 and $60 per year	Evidence based	facts.entity

Figure	Value	Basis	Source key
Continuous bond; broker entry fee	$500 per year; $150 per entry	Evidence based; management estimate	facts.logistics
Trademark USPTO fee	$350 per class plus attorney fees	Evidence based	facts.trademark
Plan B revenue and net, Year 1 and Year 3	$188K / $17K; $518K / $50K	Management estimate	plan_b

Appendix B. Glossary

Term	Meaning
AOC	active optical cable
HDMI	High Definition Multimedia Interface
ASP	average selling price
COGS	cost of goods sold
FOB	free on board (the price at the factory's port)
DDP	delivered duty paid
FBA	Fulfillment by Amazon
FNSKU	Fulfillment Network Stock Keeping Unit (Amazon's barcode)
ASIN	Amazon Standard Identification Number
ACOS	advertising cost of sales (ad spend divided by ad attributed sales)
TACOS	total advertising cost of sales (ad spend divided by total sales)
PPC	pay per click advertising
3PL	third party logistics warehouse
HTS	Harmonized Tariff Schedule
CBP	US Customs and Border Protection
MFN	most favored nation duty rate
Section 301	US trade law tariffs on China origin goods
IEEPA	International Emergency Economic Powers Act
EIN	Employer Identification Number
LLC	limited liability company
IRS	Internal Revenue Service
PE	permanent establishment
ODI	overseas direct investment report (해외직접투자 신고)

Term	Meaning
세무사	Korean licensed tax accountant
FTA	Foreign Exchange Transactions Act (외국환거래법)
USPTO	United States Patent and Trademark Office
ATC	HDMI Authorized Test Center
HDMI LA	HDMI Licensing Administrator
FCC	Federal Communications Commission
Prop 65	California Proposition 65 warning label
CL3	in wall cable fire rating (Class 3)
KVM	keyboard, video and mouse extension
DTC	direct to consumer website
LOC	line of credit
QC	quality control
MOQ	minimum order quantity
PO	purchase order
SKU	stock keeping unit
UPH	units per hour
KPI	key performance indicator
SOP	standard operating procedure
VA	virtual assistant
eARC	enhanced audio return channel
Gbps	gigabits per second
MPF, HMF	merchandise processing fee and harbor maintenance fee (US customs fees on entries)
ACE	Automated Commercial Environment (the CBP entry system)
IP	intellectual property (a trademark, patent or copyright complaint on Amazon)
CPA	certified public accountant (US licensed accountant)
SSN	Social Security number (US personal tax number; not needed for the EIN)
AQL	acceptable quality limit (the sampling standard for a QC inspection)
B2B	business to business (sales to installers, integrators and resellers)
QR	quick response code (the square barcode on the insert card that opens the setup video)
